

## Construction Of:

### Darling Anabranh Pipeline Scheme, NSW

- Client NSW Dept of Commerce
- Year Constructed 2006

The scope of works includes approx 320kms of pipeline ranging in diameter sizes from 50mm to 300mm. Works also include construction of 2 river pump stations, 2 network pump stations and 2 booster pump stations along with the installation of approx 100 storage tanks located on landholder properties.

The pipeline is estimated to save 47,000ML of water per year and enable the re-instatement of a more natural wetting and drying cycle to the environmentally degraded stream.

The Darling Anabranh Pipeline Scheme was completed ahead of schedule and under the original budget.
