

Tungamah Pipeline Project, VIC

- Client
- Year Constructed

Goulburn-Murray Water
2006

The scope of work included construction of 360km of pipelines ranging in diameter size from 50mm to 300mm. The works also included construction of a 140 megalitre earthen storage lagoon, and an automated remote controllable multi-component pump station.

At the time of tender, the contract period was two years. Mitchell Water offered to construct the project in twelve months and the project was completed within the revised time for practical completion.
