

Welsford Street Water Treatment Plant Pipeline, VIC

- Client Goulburn Valley Water
- Year Constructed 2003

The project comprised of the installation of 1.7 kilometres of twin trench 375 diameter Polyethylene and 1.5 kilometres of trenchless technology. The project had some difficult areas, particularly within the first 3 kilometres as it was located in the heart of the city of Shepparton. 700 meters of the pipe installation has to be placed within an existing 750 diameter line.

The purpose of the project is to transfer the alum out of the township at Welsford Street and out to the new Sewerage Treatment Plant. The project also involved the supply and construction of a pump station.
